Reliable, no matter where.

Containers

With the silo pressurised container, the low-pressure cubic container and the unpressurised box container, LAG offers a complete range of bulk containers. All our containers are manufactured in accordance with recognised standards (ISO, UIC, CSC & PED). As Europe's number one manufacturer of aluminium containers, we are trusted by the biggest players in the market.

Pressurised container

Aluminium

LAG pressurised containers (working pressure 2 bar) are available in 20 ft, 30 ft and 40 ft. We maximise the volume thanks to a standard width of 2,550 mm, but a custom width of 2,500 mm or 2,438 mm (ISO) is also possible. [1]

Aluminium - ADR

Are you transporting hazardous bulk goods? Then you can also choose our ADR pressurised container, with a higher quality aluminium (according to ADR regulations) and the addition of ADR markings and an ADR inspection. [3]

Stainless steel

For more aggressive bulk materials that aluminium cannot withstand, we manufacture the tank in stainless steel. [2]

Low-pressure container Unpressurised box container

Aluminium - low-pressure container

Our low-pressure container allows you to get the most volume out of your 30 ft or 40 ft pressurised container. With its cubic shape and lower working pressure of 1.5 bar, you can transport maximum volume with confidence. Its brand-new design and low tare weight will give you a competitive edge. [4]

4

Aluminium - unpressurised box container

With its strong construction and low tare weight, high level of interior finish and consequently high level of cleanability, our aluminium unpressurised box container is a durable alternative to its heavier steel sibling. Unpressurised aluminium box containers are available in 20 ft and 30 ft sizes. [5]
