

# Tank trailer

CIMC VEHICLES

Reliable, no matter where.

# Tank trailer

*LAG Trailers manufactures a wide range of stainless steel tank trailers with a modular chassis design and a very competitive tare weight. Our portfolio ranges from ADR tank trailers for chemical liquids, bitumen or acids, to non-ADR tank trailers for food or other neutral liquids.*

# ADR

## Chemistry

A wide range of tank configurations is available in ADR-compliant 1.4404 stainless steel, insulated or non-insulated. We will work with you to find the right volume, compartmentalisation, pipework, cabinet and other accessories. [1]

## Acids

You can rely on our specialised tank trailers for the transport of aggressive chemicals and acids. Depending on the product to be transported, we work with our specialized external partners to provide the most appropriate coating. [2]

## Bitumen

Aim for maximum payload thanks to LAG's 1.4541 stainless steel bitumen semi-trailers, with capacities ranging from 32,000 to 34,000 litres. Equipped with stainless steel heating elements and PSI 250 glass wool insulation from 100 to 150 mm, our bitumen semi-trailers keep your cargo at the right temperature at all times. We also manufacture steel (H2) bitumen semi-trailers with a capacity of 30,000 litres. [3]

# Non-ADR

## Food

For each transport, we will work with you to find the best solution in terms of price and quality, depending on the product to be transported. You can be sure of the best hygiene and cleanability thanks to the refined finish of the inner tank and unloading equipment. We use specific configurations for cold (e.g. milk, fruit juice or beer) or hot (e.g. chocolate) products. [4]

## Liquids

Do you transport neutral liquids, non-perishable or easy-to-clean foods? If so, we are price-conscious and choose a standard food-grade finish that meets these requirements. Other options include the installation of an AdBlue system, various unloading pumps or heating systems. [5]
